iaw-notebooks / annotation-table.ipynb

## Generating the annotation table from IAW

In this notebook, we will showcase how to create a table that displays annotation data and the corresponding annotated area image by using the Image Annotation Workbench (IAW) API.

To get start, we need to import a few dependencies. We will use OpenCV to process images and crop the annotated areas from the original images.

```
In [ ]: import cv2
import numpy as np
import requests
import base64
from IPython.display import display, HTML
import pandas as pd
import json
```

In the upcoming sections of the code, we will be defining some functions that will come in handy later on.

```
In [ ]: def load_image_from_url(url):
    """
    Load an image from a URL into OpenCV.

    Parameters
    -----
    url : str
        The URL of the image.

    Returns
    -----
    image : cv2.Image
        The image loaded from the URL.

    """
    response = requests.get(url)
    image = cv2.imdecode(np.asarray(bytearray(response.content)), cv2.IMREAD_COLOR)

    return image
```

```
def generate_annotation_table():
    """
    Generate an annotation table from the IAW API.

    Parameters
    -----
    url : str
        The URL of the IAW API.

    Returns
    -----
    table_data : dict
        A dictionary containing the annotation data.

    """
    table_data['Notes'].append('')
    # Line color.
    if 'line_color' in fields:
        table_data['Line Color'].append('<br>'.join(fields['line_color']['en']['values']))
    else:
        table_data['Line Color'].append('')

    # Create a DataFrame from the dictionary
    df = pd.DataFrame(table_data)

    # Convert the DataFrame to a HTML table
    html = df.to_html(escape=False, index=False)

    # Set content alignment to left
    html = html.replace('<th>', '<th style="text-align: left;">')
    html = html.replace('<td>', '<td style="text-align: left;">')

    # Display the HTML table
    display(HTML(html))
```

Image	Title	Tags	Notes
	Robes		(Myer 1966, 397) "The irregularly symmetrical folds of the Buddha's robe were apparently cast as ridges and later accented by deepening the furrows between them and adding shadows, especially on the cowl-like folds around the neck and the portion across the legs." (Kreitman 1992, 194) "The Master wears a thick robe which hangs in symmetrical folds from his upper body, arranging itself in horizontal pleats at the knees and vertical ones on the legs, as it descends over the edge of the seat."
	Robes		(Myer 1966, 399) "The costumes of the attendant deities, like those of other princely or divine figures, are made of two broad strips of cloth. One is wrapped around the legs like the mass of loose pleats falling down the front or over the left thigh, and the other is worn as a sort of shawl, passing under the right arm and up again over the left shoulder... the falling ends of their shawls do not dangle in irregular points but are cut off abruptly on a horizontal line (again perhaps a concession to the technical problems involved in working on shawls are spread out in heavy folds, covering the entire body from armpit to thigh."

## Schist Buddha Triad (year 5)

Study Guide Abbreviations

The Schist Buddha Triad (year 5) first appeared in *Oriental Art* in the spring of 1973 and was subsequently purchased by the Belgian art collector Claude de Marteau. Based on de Marteau's place of residence this object was referred to as the "Brussels Buddha" or the "de Marteau stèle". The significance of the piece to Gandharan art and South Asian history was highlighted in two articles published in 1974, one by Gérard Fussman and the other by J.C. Harle. Harle noted, "It is obvious that the emergence of the icon from Year 5, an elaborate composition of a well-known type, of the finest workmanship and style, is a most important event" (1974, 132). The piece was part of two exhibitions, *Light of Asia: Buddha Sakayama in Asian Art* (1984-85) and *Kushan Sculpture: Images from Early India* (1985-86). In 1990, it was purchased by a private Japanese collector. The piece was displayed in the Gandharan Art and Bamiyan Site exhibit (2007.06). In 2020 the Schist Buddhist Triad Year 5 was sold at auction by Christie's and is currently on loan to the Metropolitan Museum of Art, New York.

For scholars of Gandharan Art, the piece is notable for both its style and iconography. Stylistically, the sculpture depicts the Buddha seated on a lotus-throne under a leafy canopy flanked by Bodhisattvas and attended by deities above his shoulders. The Buddha and bodhisattvas form a triad, a composition similar to sculptures from Sahrī Bahloī and Charsadda, sites located in the Peshawar Basin of contemporary Pakistan, which comprised the heartland of ancient Gandhara. The Sahrī Bahloī triad is very similar in composition to this piece, the main difference being the bodhisattvas are reversed (Guy 2022, 86). These stylistic comparisons are significant because its exact provenance is unknown, there is no information about the piece prior to its appearance in *Oriental Art* in 1973. As is often the case, this sculpture most likely emerged on the art market after being looted from a Buddhist site in Pakistan some time prior to this date.

Comparative studies based on the triad's composition as well as other stylistic features such as robe drapery, hair patterns, facial expressions, and adornments have been conducted by Harle (1974), Mitterwallner (1987), Tissot (2005), Rñ (2008, 2017), and Guy (2022). Rñ's (2008, 50-56) detailed study of Gandharan visual types assigns the Schist Buddha Triad Year 5 to the Type II category, and pieces in this category were produced in the late 2<sup>nd</sup> to 3<sup>rd</sup> centuries CE in workshops in the Peshawar Basin, namely Charsadda, Takht-i-Bahi, and Sahrī Bahloī, making this region the probable location for the Schist Buddha Triad. Some features of the seated Buddha resemble those from sculptures found in Swat, a valley north of the Peshawar Basin, making this region another possible location for its production.

The iconographic features of the Schist Buddha Triad have been discussed extensively by art historians. The Buddha is depicted seated on a lotus throne in the preaching gesture under a leafy canopy. To the Buddha's right is most likely the bodhisattva Maitreya based on his figure-eight hairstyle and his left hand, which has broken off but that probably held a water pot. The bodhisattva on the left is commonly identified as Avalokiteshvara based on the small figure of Amitabha seated in his turban (Mitterwallner 1987, 215-16, Guy 2022, 87). Floating above the Buddha's shoulders are the Indic gods Brahma (on the Buddha's right), sporting a similar hairstyle to Maitreya, and Indra (on the left), holding his thunderbolt scepter. The scene, the Buddha surrounded by bodhisattvas and Indic gods under a canopy, was originally associated with the Buddha's Miracles at Shrevesī (Fussman 1974, 57). More recent scholarship associates this scene with Buddha-fields, paradises described in *Sāhāvastīyāna* texts (Guy 2022, 98-100). Buddha-fields is a concept found in Mahāyāna Buddhism, and relating the iconography of this Buddha triad

along with other similar pieces, with Buddha-fields would suggest that these concepts were current in Gandhara in the early centuries of the Common Era. This identification with Mahāyāna concepts might align with recent discoveries of Mahāyāna texts recorded in Gandharan manuscripts (Harrison 2018, 117-118).

The second feature of this relief that drew scholarly attention was the inscription on the pedestal. Within the large corpus of inscribed objects from Gandhara, this schist Buddha triad is one of only five inscribed Buddhist statues found in the region, the most numerous being inscribed Buddhist reliquaries. The text is a single line inscribed at the base of the image, albeit there is no decorative rim to distinguish the base from the image. The beginning of the text starts at the right edge of the base above a triangular chip in the stone and slopes down towards the centre of the image. The slope in this part of the text suggests the base was chipped prior to inscribing the text. The stem of the lotus throne extends over the base in the middle of the image and intersects the text. To the left of the lotus stem the text is level and concludes before reaching the left edge of the base. The letters and numerals throughout the text are legible.

A transcription and translation of the single-line inscription is relatively clear, and it states that the object was a donation made by Buthanada [Buddhananda] and commissioned to honour his deceased parents (Rñ 2017, 43). The contested part of the text is the date, year five. Most scholars agree that this year falls in the Kanishka era, which commenced in 127 CE. However, the Kanishka era spans at least two centuries, with the hundreds unit being dropped in the second century of the Kushan period. This means that year five could be either 132 CE or 232 CE. Rñ's comparisons with Gandharan art typologies suggest the latter date, 232 CE for year five and this would align with the Mamane Dheri statue dated to year eighty-nine, making them sixteen years apart (105-89) rather than eighty-four years apart (89-5). Some scholars have proposed other eras such as the Gupta era (Khandatavala 1985) and the Huna era (Mitterwallner 1987), but when taking into account the chronology Gandharan art and the emergence of Buddhist images during the Kushan period, year five corresponding to 232 CE seems most plausible.

Although questions about the exact provenance and date of the Schist Buddha Triad still remain, the piece exemplifies the sophisticated skills of Gandharan artisans and contributes to our understanding of Buddhism in Gandhara in the early centuries of the Common Era.

31a | Item Schist sculpture | Findspot Unknown | Dimensions Height: 61.6cm, Width: 59.1cm | Date Year 5 | Collection Private | Museum of Art, New York, United States | Language/Script Gandhārī/Kharoṣṭī

Image Annotation Workbench

FEATURES CASE STUDIES PLANS HELP DEVELOPERS SUPPORT [BOOK A DEMO](#)

## Image annotation for research, curation and education

[TRY GLYCERINE](#)

**A workbench for the annotation and publishing of International Image Interoperability Framework (IIIF) images.**

The adoption of IIIF in cultural institutions presents an opportunity for seamless collaboration on the annotation of images. A limiting factor is the threshold of development required to implement a scholarly annotation system.

Glycerine provides a suite of annotation tools and end-to-end workflows for researchers, curators and students to collaborate on projects across repositories. Sets of annotations can combine semantic tags from domain-specific vocabularies with critical analysis in multiple languages. Annotated images can be published as research outputs in immersive and engaging visualizations and archived in sustainable formats.

Open source viewer and public API. A comprehensive framework for institutional integration.
